

## === GNB (1785497227) ===

```
# This configuration file example shows how to configure the srsRAN Project gNB to allow srsUE to connect to it.
# This specific example uses ZMQ in place of a USRP for the RF-frontend, and creates an FDD cell with 10 MHz bandwidth
# To run the srsRAN Project gNB with this config, use the following command:
#   sudo ./gnb -c gnb_zmq.yaml

cu_cp:
  amf:
    addr: 10.53.1.2          # The address or hostname of the AMF.
    port: 38412
    bind_addr: 10.53.1.3    # A local IP that the gNB binds to for traffic from the AMF.

**=== NOTAS (1785497227) ===**

1. PLMN (21401) y TAC (7) configurados consistentemente en gNB, UE y Core (Regla 1).
2. dl\_arfcn (630000) seleccionado para Banda 78 y 20 MHz de ancho de banda (Regla 2).
3. common\_scs (15) se mantiene según la plantilla (Regla 3).
4. Puertos ZMQ cruzados configurados correctamente entre gNB y UE (Regla 4).
5. bind\_addr del gNB configurado a 10.53.1.3 en el YAML y 0.0.0.0 en docker-compose (Regla 5).
6. El bloque ru\_sdr se ha copiado exactamente de la plantilla (Regla 6).
7. IMSI, K y OPC se han sincronizado entre UE y SUBSCRIBER\_DB del Core (Regla 7).
8. El srates de 11.52 Msps se mantiene por la Regla 6, aunque 20 MHz de ancho de banda típicamente usaría un srates mayor.
